Customer Success Story #1:

Saint Nicholas Schools
Houston, Texas

Dynamis has provided all local network services, wide area network services, server configurations, and workstations for this multi-campus private school system since September, 1998.

The school system's primary daily financial operations software is hosted completely at their Braeswood campus on a Microsoft Windows 2000 Server with Terminal Services installed. Their Mullins campus uses Terminal Services to access the application across their internet-connected, secure virtual private network.

In 2000, the school system commissioned Dynamis to create a virtual storefront for their burgeoning uniform shop business, which had expanded from serving 200 students per year to over 650 students per year.

The Saint Nicholas Schools Uniform Shop serves online 24 / 7 at http://www.snschools.com/shop.htm
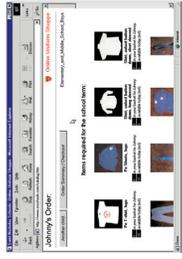

As a result of this virtual storefront, the uniform shop has expanded to meet the 325% increase in demand with only a 100% increase in allocated staff, and has enjoyed a 200% increase in overall profitability while the school parents enjoy the convenience of a 24/7 internet storefront. Plus, the purchasing department has the advantage of up-to-the minute inventory and rate-of-sales information to help ensure timely availability of merchandise.

In 2002, the school system also commissioned the rewrite of a legacy staff timekeeping application. Executive management now has the ability to manage, view and respond to real-time staff scheduling issues - resulting in better control over payroll expenses. The rewrite also makes the majority of this critically important application accessible from remote locations using a web- enabled Palm Pilot or Ipaq.

Customer Success Story #2:

Medical Center Charter School
Houston, Texas

In early 2001, this Texas State Charter School commissioned Dynamis to develop a large-scale web application which would allow teachers to plan and grade all assignments using a simple web browser, in the classroom or at home; parents to view their children's assignments and grades online, parents and teachers to communicate privately without the use of email, and administrators to discreetly oversee al academic and parent-teacher communication aspects of the school's operation.
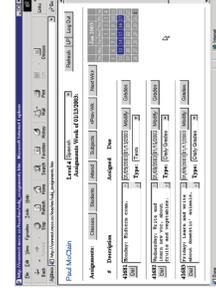

The new application was implemented fully beginning with the 2001-2002 school year, and has been a source of accolades from school parents, teachers, and administrators ever since.

Parents rave about the ability to watch their child's grades and communicate with the teachers, teachers rave about the timesaving and organizational benefits as well as their ability to use it from home, and administrators rave about the flexibility, power, ease of use and amazing intuitiveness of the application, noting that it is a remarkable improvement over systems they have used in the past.
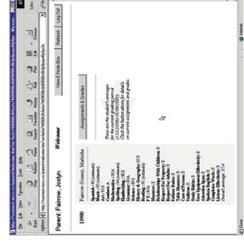

The application serves parents, teachers, and school administrators 24 hours a day, 7 days a week at: http://connect.mccs.cc

Customer Success Story #3:

Benefit Concepts
Houston, Texas

While customer success stories #1 and #2 highlight our custom web application abilities, customer success story #3 is more about the day to day reliability and dependability of our servers, internet access solutions, and local and wide area network configurations.

Mark Kennedy, president of Benefit Concepts, indicated his recommendation of our products and services in the following letter:

"I'm writing to introduce you to Dynamis, the outstanding company we've used for our server, PC and network needs for the past 3 years. Over that time I've been very impressed with many things about this company: their responsiveness, their creative and affordable solutions to our particular needs, their ability to accurately estimate and complete jobs within the quoted price, the swiss-watch-reliability of the server they built and installed for us 3 years ago, and the performance and reliability of the other equipment and software we've purchased from them since then."

"The difference between the last network services company we used, and Dynamis, has been like night and day. If you have any repair, replacement, upgrade or configuration needs involving your server, PC's, network, or internet access, I recommend giving Dynamis a call."
